

# Assignment 10

Rubeena Aafreen

**Abstract—**This assignment deals with annihilator of vector space. Given three vectors

$$\alpha_1 = \begin{pmatrix} 1 \\ 2 \\ 1 \\ 0 \\ 0 \end{pmatrix}, \quad \alpha_2 = \begin{pmatrix} 0 \\ 1 \\ 3 \\ 3 \\ 1 \end{pmatrix}, \quad \alpha_3 = \begin{pmatrix} 1 \\ 4 \\ 6 \\ 4 \\ 1 \end{pmatrix} \quad (3.0.3)$$

## 1 PROBLEM

Let  $\mathbf{W}$  be the subspace of  $\mathbb{R}^5$  which is spanned by the vectors

$$\begin{aligned} \alpha_1 &= \epsilon_1 + 2\epsilon_2 + \epsilon_3, \\ \alpha_2 &= \epsilon_2 + 3\epsilon_3 + 3\epsilon_4 + \epsilon_5, \\ \alpha_3 &= \epsilon_1 + 4\epsilon_2 + 6\epsilon_3 + 4\epsilon_4 + \epsilon_5 \end{aligned} \quad (1.0.1)$$

Find a basis for  $\mathbf{W}^0$

## 2 ANNIHILATOR

### 2.1 Definition

If  $\mathbf{V}$  is a vector space over the field  $\mathbb{F}$  and  $\mathbf{W}$  is a subset of  $\mathbf{V}$ , the annihilator of  $\mathbf{W}$  is the set  $\mathbf{W}^0$  of linear functionals  $\mathbf{f}$  on  $\mathbf{V}$  such that  $\mathbf{f}(\alpha) = 0$  for every  $\alpha$  in  $\mathbf{W}$ .

### 2.2 Properties of Annihilator

If  $f$  is a linear functional on  $R^n$ :

$$f(x_1, x_2, \dots, x_n) = \sum_{j=1}^n c_j x_j \quad (2.2.1)$$

Then  $f$  is in  $\mathbf{W}^0$  if and only if

$$\forall \alpha \in \mathbf{W}: f(\alpha) = 0 \iff f = 0 \quad (2.2.2)$$

## 3 SOLUTION

equation (2.2.1) can be expressed as:

$$\mathbf{f}(\mathbf{x}) = \mathbf{x}^T \mathbf{c} \quad (3.0.1)$$

$$\text{where } \mathbf{x} = \begin{pmatrix} x_1 \\ x_2 \\ x_3 \\ x_4 \\ x_5 \end{pmatrix} \text{ and } \mathbf{c} = \begin{pmatrix} c_1 \\ c_2 \\ c_3 \\ c_4 \\ c_5 \end{pmatrix} \quad (3.0.2)$$

Let matrix  $A$  with column vectors  $\alpha_1, \alpha_2, \alpha_3$ :

$$\mathbf{A} = \begin{pmatrix} 1 & 0 & 1 \\ 2 & 1 & 4 \\ 1 & 3 & 6 \\ 0 & 3 & 4 \\ 0 & 1 & 1 \end{pmatrix} \quad (3.0.4)$$

Given that  $\mathbf{f}$  is a linear functional on  $\mathbb{R}^5$ , then  $\mathbf{f}$  is in  $\mathbf{W}^0$  if and only if,

$$f(\alpha_i) = 0, i = 1, 2, 3 \quad (3.0.5)$$

$$\implies \mathbf{A}^T \mathbf{c} = \mathbf{0} \quad (3.0.6)$$

Converting the equation (3.0.6) into system of equations, we have,

$$\begin{pmatrix} 1 & 2 & 1 & 0 & 0 \\ 0 & 1 & 3 & 3 & 1 \\ 1 & 4 & 6 & 4 & 1 \end{pmatrix} \begin{pmatrix} c_1 \\ c_2 \\ c_3 \\ c_4 \\ c_5 \end{pmatrix} = \mathbf{0} \quad (3.0.7)$$

Converting equation (3.0.7) into row reduced echelon form,

$$\begin{pmatrix} 1 & 2 & 1 & 0 & 0 \\ 0 & 1 & 3 & 3 & 1 \\ 1 & 4 & 6 & 4 & 1 \end{pmatrix} \xrightarrow{rref} \begin{pmatrix} 1 & 0 & 0 & 4 & 3 \\ 0 & 1 & 0 & -3 & -2 \\ 0 & 0 & 1 & 2 & 1 \end{pmatrix} \quad (3.0.8)$$

From equation (3.0.8), we have,

$$c_1 = -(4c_4 + 3c_5) \quad (3.0.9)$$

$$c_2 = (3c_4 + 2c_5) \quad (3.0.10)$$

$$c_3 = -(2c_4 + c_5) \quad (3.0.11)$$

Therefore, general element of  $\mathbf{W}^0$  is therefore,

$$\begin{aligned} f(x_1, \dots, x_5) = & -(4c_4 + 3c_5)x_1 + (3_4 + 2c_5)x_2 \\ & -(2c_4 + c_5)x_3 + c_4x_4 + c_5x_5 \end{aligned} \quad (3.0.12)$$

Therefore, dimension of  $\mathbf{W}^0$  is 2 and a basis  $\{f_1, f_2\}$  can be obtained by putting  $c_4 = 0, c_5 = 1$  and  $c_4 = 1, c_5 = 0$  in equation (3.0.12)

$$f_1(x_1, \dots, x_5) = -3x_1 + 2x_2 - x_3 + x_5 \quad (3.0.13)$$

$$f_2(x_1, \dots, x_5) = -4x_1 + 3x_2 - 2x_3 + x_4 \quad (3.0.14)$$
