1 Problem

True or False? If a diagonalizable operator has only the characteristic values 0 and 1, it is a projection.

2 Definitions

Diagonalizable Operator	For a linear operator $\mathbf{T}: \mathbf{V} \longrightarrow \mathbf{V}$, $\mathbf{T}$ is a diagonalizable operator if $\exists$ some basis for $\mathbf{V}$ such that the matrix representing T is a diagonal matrix i.e. $$\mathbf{T}(\mathbf{X}) = \mathbf{A}\mathbf{X},$$ $\implies$ $\mathbf{A}$ is a diagonalizable matrix
Properties of Projection	If $n \times n$ matrix $\mathbf{A}$ is projecion matrix, then $$\mathbf{A}^2 = \mathbf{A}$$

TABLE 1: Definitions

3 Solution

Diagonalizability	Let $\mathbf{A}$ be $n \times n$ matrix. Given that $\mathbf{A}$ is diagonalizable, it can be expressed as, $$\mathbf{A} = \mathbf{P}\mathbf{\Lambda}\mathbf{P}^{-1}$$ $$\implies \mathbf{A}\mathbf{P} = \mathbf{P}\mathbf{\Lambda} \quad \ldots(1)$$ where, $\mathbf{\Lambda} = \begin{pmatrix} \lambda_1 & 0 & \ldots & 0 \\ 0 & \lambda_2 & \ldots & 0 \\ \vdots & \vdots & \ldots & \vdots \\ 0 & 0 & \ldots & \lambda_n \end{pmatrix}$
Eigen values	Given that $\mathbf{A}$ has eigen values 0 and 1 $\implies$ $\mathbf{\Lambda}$ has diagonal entries of $0s$ and $1s$ only $\implies \lambda_i = 0$ or $1, \qquad i = 0, 1, \ldots, n$ $\implies \lambda_i^2 = 0$ or 1 $\implies \lambda_i^2 = \lambda_i$ $$\implies \mathbf{\Lambda}^2 = \mathbf{\Lambda}\mathbf{\Lambda} = \begin{pmatrix} \lambda_1^2 & 0 & \ldots & 0 \\ 0 & \lambda_2^2 & \ldots & 0 \\ \vdots & \vdots & \ldots & \vdots \\ 0 & 0 & \ldots & \lambda_n^2 \end{pmatrix} = \mathbf{\Lambda} \quad \ldots(2)$$
Projection	$$\mathbf{A} = \mathbf{P}\mathbf{\Lambda}\mathbf{P}^{-1}$$ $$\implies \mathbf{A}\mathbf{A} = \mathbf{A}\mathbf{P}\mathbf{\Lambda}\mathbf{P}^{-1}$$ $$\implies \mathbf{A}^2 = (\mathbf{A}\mathbf{P})\,\mathbf{\Lambda}\mathbf{P}^{-1}$$ From (1), $$\implies \mathbf{A}^2 = \mathbf{P}\mathbf{\Lambda}\mathbf{\Lambda}\mathbf{P}^{-1}$$ $$= \mathbf{P}\mathbf{\Lambda}^2\mathbf{P}^{-1}$$ From (2), $$\implies \mathbf{A}^2 = \mathbf{P}\mathbf{\Lambda}\mathbf{P}^{-1}$$ $$= \mathbf{A}$$ Therefore, $$\mathbf{A}^2 = \mathbf{A}$$ Hence, $\mathbf{A}$ is a projection matrix
Conclusion	Given statement is True
